RE: Community Involvement Plan - South Green Avenue

Dear Ms. Allen:

Please find enclosed a copy of the Final Community Involvement Plan (CIP) for the South Green Avenue (formerly MichCon Station H) site in Detroit, Michigan. Additional copies will be distributed to the repository and OSC at your direction.

Do not hesitate to call either Meg Moosa at (440) 729-6266 or me at (847) 918-4013 should you have any questions regarding this submittal.

Very truly yours,

ROY F. WESTON

1. OVERVIEW OF THE COMMUNITY INVOLVEMENT PLAN

The United States Environmental Protection Agency (U.S. EPA) developed this **Community Involvement Plan (CIP)** in preparation for community involvement activities to be conducted prior to and during the cleanup activities at the South Green Avenue Site in Detroit, Michigan. The purpose of this document is to provide information about community concerns and present a plan that will enhance communication between local residents and U.S. EPA as the cleanup at the site progresses.

(Words appearing in **bold** are defined in Attachment A.)

The objective of community involvement is to involve the public in activities and decisions related to the cleanup of Superfund sites. The Superfund community involvement program promotes two-way communication between members of the public and U.S. EPA. U.S. EPA has learned that its decision-making ability is enhanced by actively soliciting comments and information from the public. Public input can be useful in two ways:

- Communities are able to provide valuable information on local history, citizen involvement, and site conditions.
- By expressing its concerns, the community is able to assist U.S. EPA in developing a response that more effectively addresses the community's needs.

The information in this plan is based primarily on interviews with local officials and residents conducted during a community assessment, performed by U.S. EPA from June 20 - 27, 2000.

1.1 A BRIEF EXPLANATION OF THE SUPERFUND PROCESS

In 1980, the United States Congress enacted the **Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)**, also called **Superfund**. CERCLA authorizes U.S. EPA to investigate and respond to hazardous substance releases that may endanger public health and the environment. The 1980 law also established a \$1.6 billion fund to pay for the investigation and cleanup of sites where parties responsible for the releases are unable or unwilling to address

This document was prepared by Roy F. Weston, Inc., expressly for EPA. It shall not be released or disclosed in whole or in part without the express, written permission of EPA.

contamination problems. Congress amended and reauthorized the Superfund law in October 1986 as the **Superfund Amendments and Reauthorization Act (SARA)**, increasing the size of the fund to about \$8.5 billion. SARA expired in 1993 and is in the process of being amended and reauthorized.

In an effort to make cleanup of Superfund sites more efficient and cost effective, in 1987, the Emergency Response Division of U.S. EPA, began development of the guidance for the Engineering Evaluation/Cost Analysis (EE/CA) process. The EE/CA is a flexible document tailored to the scope, goals, and objectives of each individual site. The size and extent of the contamination will determine the level of detail of the EE/CA. It contains only the information necessary to support the selection of a cleanup alternative, and relies on existing information whenever possible.

The EE/CA provides definitive information on:

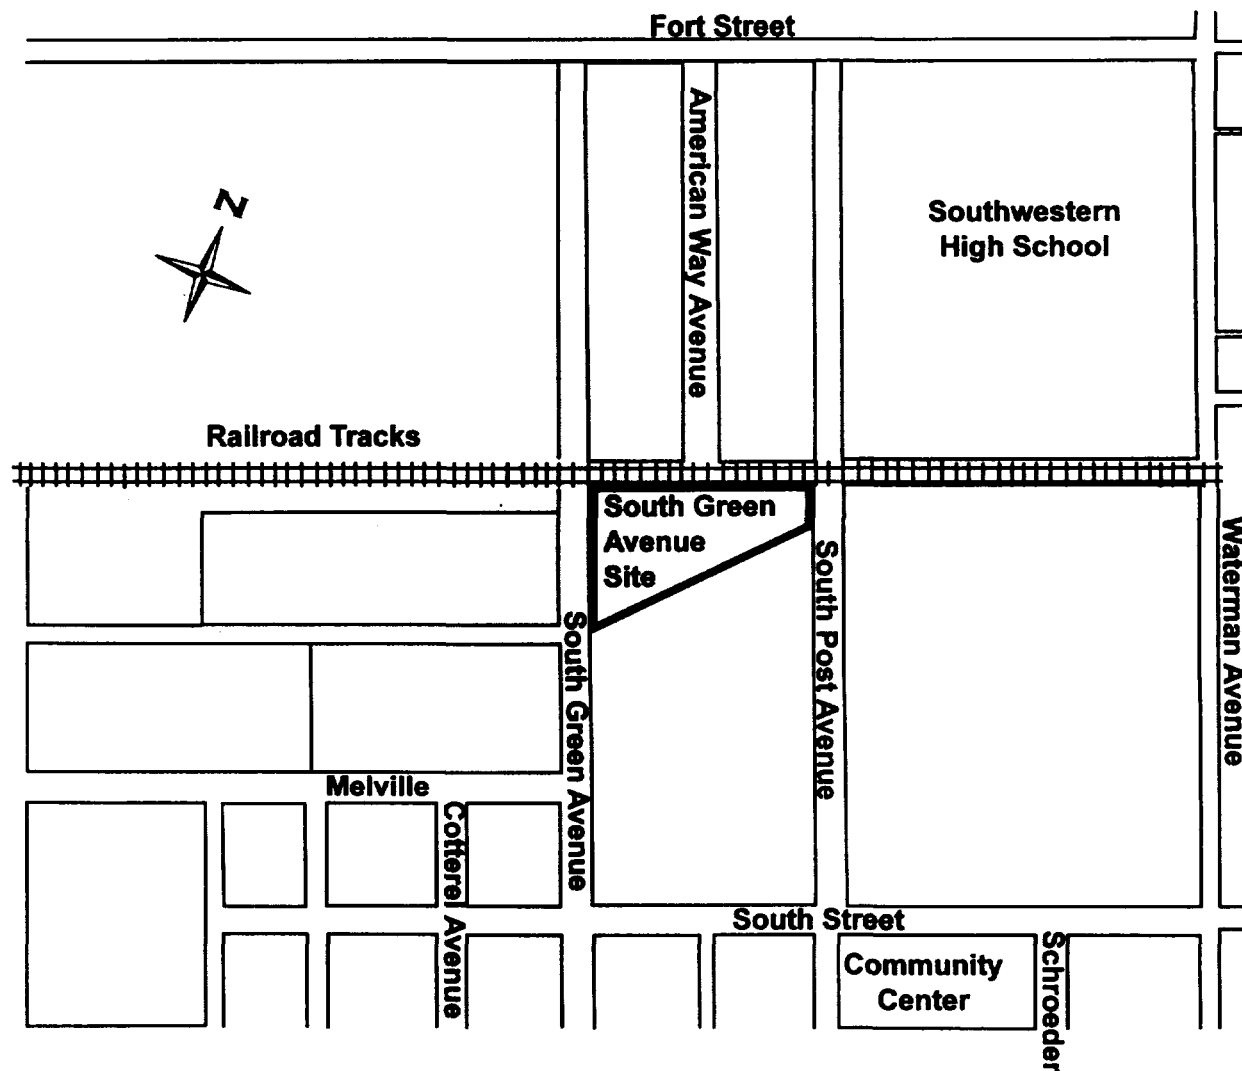

- The source, nature, and extent of contamination.
- The risks posed by the site.
- An analysis of the clean-up alternatives.

If one or more parties believed to be responsible for site contamination problems are identified, these **potentially responsible parties (PRPs)** may conduct the EE/CA under U.S. EPA supervision. If no PRPs are found, or the PRPs do not agree to conduct the EE/CA, the investigation is conducted by U.S. EPA. U.S. EPA may, through legal action, later recover from the PRPs any costs associated with the investigation. At the South Green Avenue Site, a few PRPs have been identified and one PRP has agreed to conduct the investigation. The PRP and/or U.S. EPA may also, through legal action, later recover some of the cost from the remaining PRPs.

If the site poses an immediate threat to public health or the environment, U.S. EPA can intervene with an **emergency response action**.

At the completion of the EE/CA, U.S. EPA will hold a **public comment period** on the alternatives. At the end of the public comment period, the final cleanup remedy will be approved and designed. The actual cleanup begins once these planning activities are finished.

Figure 1
Site Location Map

This document was prepared by Roy F. Weston, Inc., expressly for EPA. It shall not be released or disclosed in whole or in part without the express, written permission of EPA.

3. COMMUNITY BACKGROUND

3.1 COMMUNITY PROFILE

The property occupied by the Site is zoned M4, Intensive Industrial District, by the Detroit Zoning Ordinance. An M4 zoning district permits "uses which are usually objectionable" and prohibits the construction of residences. The site is also part of one of the City of Detroit's Renaissance Zones. Renaissance Zones are areas that have a significant industrial presence, but also have high vacancy rates and are significantly underutilized. These areas experience both economic and physical decline. The City of Detroit owns a substantial number of these properties, which yields low tax revenues. The Renaissance Zones provide considerable tax incentives to industrial and commercial enterprises that will create increased job opportunities and promote the reuse of underutilized land.

Local officials have characterized community interest as being high in the portion of the city where the site is located. Several local community groups maintain an active presence in southwest Detroit. Air and noise pollution, heavy industrial traffic and environmental pollution are all major issues in the area surrounding the site.

3.2 CHRONOLOGY OF COMMUNITY INVOLVEMENT

Representatives of U.S. EPA Region 5 will respond to the community's needs by speaking with residents and public officials, holding public meetings, and publishing fact sheets and update letters. U.S. EPA will continue to maintain contact with City of Detroit officials.

An information repository has been established at the Detroit Public Library, Sociology and Economics Department, 5201 Woodward Avenue, Detroit, Michigan. The information repository contains site-related legal and technical documentation, and is available for public review.

3. COMMUNITY BACKGROUND

3.1 COMMUNITY PROFILE

The property occupied by the Site is zoned M4, Intensive Industrial District, by the Detroit Zoning Ordinance. An M4 zoning district permits "uses which are usually objectionable" and prohibits the construction of residences. The site is also part of one of the City of Detroit's Renaissance Zones. Renaissance Zones are areas that have a significant industrial presence, but also have high vacancy rates and are significantly underutilized. These areas experience both economic and physical decline. The City of Detroit owns a substantial number of these properties, which yields low tax revenues. The Renaissance Zones provide considerable tax incentives to industrial and commercial enterprises that will create increased job opportunities and promote the reuse of underutilized land.

Local officials have characterized community interest as being high in the portion of the city where the site is located. Several local community groups maintain an active presence in southwest Detroit. Air and noise pollution, heavy industrial traffic and environmental pollution are all major issues in the area surrounding the site.

3.2 CHRONOLOGY OF COMMUNITY INVOLVEMENT

Representatives of U.S. EPA Region 5 will respond to the community's needs by speaking with residents and public officials, holding public meetings, and publishing fact sheets and update letters. U.S. EPA will continue to maintain contact with City of Detroit officials.

An information repository has been established at the Detroit Public Library, Sociology and Economics Department, 5201 Woodward Avenue, Detroit, Michigan. The information repository contains site-related legal and technical documentation, and is available for public review.

3.3 KEY COMMUNITY ISSUES AND CONCERNS

In June 2000, U.S. EPA conducted telephone interviews with public officials and residents to discuss community concerns regarding the cleanup of the South Green Avenue Site. The following is a summary of the major areas of concern raised during those interviews.

Concerns about contamination from the South Green Avenue Site are high among some members of the Detroit community, possibly because:

- The site is located in a heavy industrial area.
- There is a large amount of industrial traffic in the area.
- Air quality and noise pollution are affected by the intensive industrial presence.
- The site is located in a Renaissance Zone, which means the area is being targeted for redevelopment.
- There are several active interest groups in southwest Detroit.

Health and Safety: The site is located in an area that is mixed residential/heavy industrial. The nearest residence is located approximately 400 feet southeast of the site. Residents express concern that site-related trucks would further stress already heavily traveled roads. Many concerns were also expressed over air quality. Some of those interviewed reported that southwest Detroit has significant air quality problems associated with nearby industry. They were concerned that site-related contamination may become airborne during excavation and migrate to unsuspecting residents.

Property Values: Many of the community-based interest groups were concerned over property values. Because the site is located in a Renaissance Zone, the area is being targeted for redevelopment. The community groups were pleased that on-site contamination is being addressed. They view it as a positive step toward the goal of the Renaissance Zone.

4. HIGHLIGHTS OF THE COMMUNITY INVOLVEMENT PROGRAM

Community involvement objectives and activities have been developed to encourage public participation during upcoming activities at the site. They are intended to ensure that residents and interested officials are informed about activities taking place at the South Green Avenue Site and, at appropriate times, have an opportunity for input during the cleanup process. To be effective, the community involvement program must be formulated according to the community's need for information, and its interest and willingness to participate in the process.

The following objectives have been developed as a guideline for the implementation of community involvement activities.

4.1 ENLIST THE SUPPORT AND PARTICIPATION OF CITY OFFICIALS AND COMMUNITY LEADERS

City officials and community leaders provide an invaluable resource in U.S. EPA's effort to understand and monitor community concerns. Local officials' and community leaders' frequent contact with residents provide direct lines of communication, in which questions and concerns may be addressed or referred to U.S. EPA. It is essential that local officials be informed of site activities, plans, findings, and developments. Appropriate officials and community leaders to keep informed and involved include individuals listed in Attachment C of this CIP.

4.2 IDENTIFY AND ASSESS CITIZEN PERCEPTION OF THE SITE

Information regarding citizen concern and perception of the site is indispensable. At this time, the areas of concern are; the potential for stress on already heavily traveled roads, the potential for the contaminants to become airborne during excavation, and property values. Understanding these concerns will help U.S. EPA focus the level of effort for community involvement at the site. Background information and the direction of local concern will determine those activities that best meet the community's needs.

4.3 PROVIDE FOLLOW-UP EXPLANATIONS ABOUT TECHNICAL ACTIVITIES AND CONTAMINANTS

Concise, easily understood, and timely information should be available to area residents concerning the schedule of technical activities, their purpose, and their outcome. A written, basic description and discussion of any contaminants connected with the South Green Avenue Site, should be provided so that residents understand possible threats to the public near or on site. The community involvement staff should also attempt to identify special situations or concerns where more specialized information is desired by individuals or groups. Finally, to ensure that inquiries from the community are handled efficiently and consistently, U.S. EPA should continue to maintain a single point of contact.

4.4 INFORM THE COMMUNITY ABOUT THE PROCEDURES, POLICIES, AND REQUIREMENTS OF THE SUPERFUND PROGRAM

Many individuals interviewed regarding the South Green Avenue Site did not fully understand the Superfund program. To dispel possible confusion about U.S. EPA's purpose and responsibilities at the site, an effort should be made to circulate basic information to the community describing the Superfund process. U.S. EPA terms, acronyms, policies, and procedures should also be explained as site activities progress.

As the cleanup process progresses, it will also be worthwhile to evaluate the effectiveness of the community involvement activities in providing information to residents and encouraging citizen participation.

5. COMMUNITY INVOLVEMENT TECHNIQUES

The Superfund law requires that certain community involvement activities be conducted at designated milestones during the EE/CA process. In addition, U.S. EPA Region 5 undertakes other activities to strengthen its communication. A member of the U.S. EPA Region 5 community involvement staff has been designated to respond directly to media and public inquiries regarding site activities. Activities that will be conducted during the cleanup of the South Green Avenue Site are described below.

5.1 MAINTAIN CONTACT WITH LOCAL OFFICIALS AND COMMUNITY LEADERS

The process of community interviews has already set up an initial communications link between the community and U.S. EPA. Furthermore, the Community Involvement Coordinator for the site has been designated by U.S. EPA as a contact person (See Attachment C – U.S. EPA Representatives). Access to a contact person reduces the frustration that may accompany attempts to obtain information and communicate with the several agencies and organizations involved in the cleanup. The Community Involvement Coordinator will continue to maintain contact with the appropriate local officials and community leaders to provide them the opportunity to address any issues that may arise during the cleanup at the site.

5.2 MAINTAIN CONTACT WITH AREA RESIDENTS

The information that residents may provide U.S. EPA about the background of a site is valuable to U.S. EPA in planning the cleanup of a site. U.S. EPA will maintain a mailing list as one means of providing information to interested residents and the general community. Residents can voice their concerns regarding the site directly to the following designated U.S. EPA representatives:

Ms. Cheryl Allen
Community Involvement Coordinator (P-19J)
Office of Public Affairs
U.S. EPA Region 5
77 West Jackson Boulevard
Chicago, IL 60604-3590

(312) 353-6196
1 (800) 621-8431 ext. 36196
allen.cheryl@epa.gov

Mr. Ralph Dollhopf
On-Scene Coordinator
Emergency Response Branch – Section 1
U.S. EPA, Large Lakes Research Station/ORD
9311 Groh Road
Grosse Ile, MI 48138

(734) 692-7682
dollhopf.ralph@epa.gov

5.3 MAINTAIN AN INFORMATION REPOSITORY

A repository is an information file required under Superfund that contains documents and other information about the site and Superfund in general. It typically includes consent orders, work plans, reports, and copies of applicable laws. The establishment of an information repository facilitates public access to site-related information. A repository for the South Green Avenue Site has been established by U.S. EPA. Its location is listed below and also in Attachment B of this CIP. Many documents, plans, and other finalized written materials generated during the investigation and cleanup are placed in the repository. U.S. EPA will notify community groups, city officials, and interested citizens on the mailing list of its location.

The information repository for the South Green Avenue Site is available for public review at the following location and hours:

Detroit Public Library
Sociology and Economics Department
5201 Woodward Ave.
Detroit, MI 48202-4007

Hours:

Tuesday, Thursday, Friday, and Saturday 9:30 a.m. – 5:30 p.m.
Wednesday 1:00 p.m. – 9:00 p.m.
Closed Sunday and Monday

5.4 WRITE AND DISTRIBUTE NEWS RELEASES

Prepared statements will be released to local newspapers, and radio and television stations to announce the discovery of any significant findings at the site during the cleanup, and to notify the community of any public meetings or public comment periods. Additional news releases are advisable at the completion of the cleanup. The news releases should be mailed to the media list in Attachment C and placed in the site information repository. News releases may also be posted on U.S. EPA Region 5's Web page at: www.epa.gov/region5/news99/index.htm.

5.5 PREPARE AND DISTRIBUTE FACT SHEETS AND UPDATE REPORTS

Fact sheets and update reports, written in non-technical language and produced to coincide with particular milestones during the cleanup process, are intended to provide the community with detailed information about the site. These will be placed in the information repository and sent to all parties on the mailing list. In addition, other fact sheets or update reports may be developed to respond to specific community information needs. Information may also be placed on U.S. EPA Region 5's Web page at: www.epa.gov/region5/sites/.

5.6 HOLD PUBLIC MEETINGS

A meeting provides an opportunity for U.S. EPA to present information and a proposed course of action. U.S. EPA staff is available to provide information and answer questions. A public meeting is not necessarily a formal public hearing where testimony is received. Instead it might be a meeting to exchange information and comments. Public meetings provide community members with an opportunity to express their concerns to the U.S. EPA, state, or local government officials. Public meetings or informal availability sessions may be held at various times throughout the process. Scheduling public meetings should remain flexible to account for technical milestones and public interest. Upcoming milestones that may warrant an information session or public meeting include the release of the proposed cleanup plan outlining the cleanup alternatives for addressing site contamination; decisions on the design for the cleanup; and the start of the site cleanup.

5.7 PUBLISHED NOTICES

Before adoption of any plan for cleanup is undertaken, Superfund requires that a notice and brief explanation of the proposed plan for cleanup be published in a major local newspaper of general circulation, such as the *Detroit Free Press* or the *Detroit News*. A notice explaining the final cleanup plan adopted for the site will be published and the final decision document will be made available to the public in the information repository. A notice may also be placed if significant findings are made during the cleanup at the site or upon completion of the cleanup. Notices or advertisements also will be published to announce all public meetings sponsored by U.S. EPA.

5.8 PUBLIC COMMENT PERIOD

Superfund requires that a minimum 30-day public comment period be held after completion of the EE/CA. The purpose of the comment period is to enable all interested parties, including local officials, residents, groups, and PRPs, an opportunity to express their opinions about the recommended alternative and participate in the decision-making process for site cleanup. The comment period will be announced by an advertisement published in the *Detroit Free Press* and/or the *Detroit News* as well as mail to the people on the mailing list. A press release

This document was prepared by Roy F. Weston, Inc., expressly for EPA. It shall not be released or disclosed in whole or in part without the express, written permission of EPA.

announcing the comment period for the South Green Avenue Site also will be sent to the local media. Community input during this period will be encouraged.

5.9 PUBLIC MEETING TRANSCRIPT

If a public hearing is held during the public comment period on the U.S. EPA recommended alternative, then a verbatim transcript will be taken. U.S. EPA will place the transcript in the information repository.

5.10 RESPONSIVENESS SUMMARY

All comments received during the public comment period will be addressed in a document called a **Responsiveness Summary**. This report is required by Superfund as part of the final decision document called an Action Memorandum. The Action Memorandum is a formal document that details the process by which the final cleanup action for the site was chosen. The Action Memorandum will be placed in the site information repository.

5.11 REVISE THE COMMUNITY INVOLVEMENT PLAN

Through the various means of communication and interaction previously listed, U.S. EPA will note changes in community concerns, information needs and activities, and may modify this Community Involvement Plan as necessary to respond to those changes.

5.12 PROGRAM EVALUATION

At key milestones during the cleanup, U.S. EPA Region 5 may evaluate the effectiveness of the community involvement program for the South Green Avenue Site. These milestones may include the completion of the cleanup phase. Questionnaires or other evaluation tools may be designed to assess the effectiveness of public meetings, fact sheets, and other activities in conveying information and encouraging citizen participation.

6. SCHEDULE AND TIMELINE

Community involvement activities may be implemented to coincide with the technical milestones as presented in Figure 2.

ATTACHMENT A

GLOSSARY

Action Memorandum

A document issued after the EE/CA that describes U.S. EPA's selected remedy for cleanup of a site.

Administrative Order on Consent

A legal agreement signed by U.S. EPA and an individual, business, or other entity through which the violator agrees to pay for correction of violations, take the required corrective or cleanup actions, or refrain from an activity. It describes the actions to be taken, may be subject to a comment period, applies to civil actions, and can be enforced in court.

Brownfields

Abandoned, idled, or under used industrial and commercial facilities/sites where expansion or redevelopment is complicated by real or perceived environmental contamination. They can be in urban, suburban or rural areas. U.S. EPA's Brownfields initiative helps communities mitigate potential health risks and restore the economic viability of such areas or properties.

Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)

A Federal law passed in 1980 and modified in 1986 by the Superfund Amendments and Reauthorization Act (SARA). The Act created a special tax that goes into a trust fund, commonly known as Superfund, to investigate and clean up hazardous waste sites. Under the program, U.S. EPA can either:

- Pay for site cleanup when parties responsible for the contamination cannot be located or are unwilling or unable to perform the work; or
- Take legal action to force parties responsible for site contamination to clean up the site or pay back the Federal government for the cost of the cleanup.

Community Involvement Plan (CIP)

A plan that outlines specific community involvement activities that occur during the investigation and cleanup at the site. The CIP outlines how U.S. EPA will keep the public informed of work at the site and the ways in which citizens can review and comment on decisions that may affect the final actions at the site. The document is available in the site's Information Repository maintained by U.S. EPA.

Emergency Response Action

If a site poses an immediate threat to public health or the environment, an emergency response action will be taken immediately to stop the threat.

Polychlorinated biphenyls (PCBs)

A family of organic (carbon-containing) compounds. PCBs are extremely persistent in the environment; they do not break down into less harmful chemicals over a long period of time. PCBs may enter the food chain and be consumed by humans. If ingested, they are stored in the fatty tissues of animals and humans, and are not excreted with normal body wastes. These compounds have no smell or taste and exist as either oily liquids or solids. Health effects that may result from exposure to PCBs include skin irritations and irritation to the nose and lungs. Long-term exposure to PCBs can cause liver damage and has been shown to cause cancer in laboratory animals.

Potentially Responsible Parties (PRPs)

Any individual or company (including owners, operators, transporters or generators) potentially responsible for, or contributing to a spill or other contamination at a Superfund site. Whenever possible, through administrative and legal actions, U.S. EPA requires PRPs to clean up hazardous sites they have contaminated.

Public Comment Period

A time during which the public can review and comment on various documents and U.S. EPA actions. For example, a minimum 30-day comment period is held to allow citizens to review and comment on the final EE/CA.

Responsiveness Summary

The section within the Record of Decision that summarizes comments received from the public during the public comment period, and provides U.S. EPA's responses to them.

Superfund

The commonly used term that describes the Federal legislation authorizing U.S. EPA to investigate and respond to the release or threatened release of hazardous substances into the environment. It is also known as CERCLA (Comprehensive Environmental Response, Compensation and Liability Act). In 1986, Superfund was reauthorized as SARA (Superfund Amendments and Reauthorization Act).

Superfund Amendments and Reauthorization Act (SARA)

Modifications to CERCLA enacted on October 17, 1986.
